Period for Reply

A SHORTENED STATUTORY PERIOD FOR REPLY IS SET TO EXPIRE 3 MONTH(S) FROM THE MAILING DATE OF THIS COMMUNICATION.

- Extensions of time may be available under the provisions of 37 CFR 1.136(a). In no event, however, may a reply be timely filed after SIX (6) MONTHS from the mailing date of this communication.
- If the period for reply specified above is less than thirty (30) days, a reply within the statutory minimum of thirty (30) days will be considered timely.
- If NO period for reply is specified above, the maximum statutory period will apply and will expire SIX (6) MONTHS from the mailing date of this communication.
- Failure to reply within the set or extended period for reply will, by statute, cause the application to become ABANDONED (35 U.S.C. § 133). Any reply received by the Office later than three months after the mailing date of this communication, even if timely filed, may reduce any earned patent term adjustment. See 37 CFR 1.704(b).

DETAILED ACTION

Claim Rejections - 35 USC § 103

The following is a quotation of 35 U.S.C. 103(a) which forms the basis for all obviousness rejections set forth in this Office action:

(a) A patent may not be obtained though the invention is not identically disclosed or described as set forth in section 102 of this title, if the differences between the subject matter sought to be patented and the prior art are such that the subject matter as a whole would have been obvious at the time the invention was made to a person having ordinary skill in the art to which said subject matter pertains. Patentability shall not be negated by the manner in which the invention was made.

Claims 1 and 2 are rejected under 35 U.S.C. 103(a) as being unpatentable over Dalton et al (US 2003/0004140 or 10/024,018; 1/2/03), Rapaport (US 5049372; 9/17/91) and Altaba et al (US 2005/0130922; 6/16/05 or 10/927,951). Dalton teaches a method of treating cancer (a disease associated with bone metastasis) comprising administering to a patient an effective amount bisphosphonate to disrupt cancer cell adhesion in vivo thereby enhancing the efficacy of chemotherapeutic (doxorubicin) and/or radiation treatments. Note that doxorubicin is the targeting agent. See abstract, paragraph 29, claims 1-11. Dalton does not teach the method comprising an adenosine compound and adenosine receptor blocker such as deoxycoformycin. However, Rapaport teaches a method of treating cancer (a disease associated with bone metastasis) comprising administering to a patient an effective amount adenosine monophosphate (see abstract, claim 1), and Altaba teaches a method of treating cancer (disease associated with bone metastasis) comprising administering to a patient an effective amount deoxycoformycin (see abstract, paragraph 185). It would have been obvious to one having ordinary skill in the art to modify the method of Dalton to include the AMP taught by Rapaport and the deoxycoformycin taught by Altaba. One would have been

motivated to do this since all art methods cited are to the treatment of cancer which is a disease associated with bone metastasis.
